

## Sustainability Survey

Area of sustainability	Examples of sustainable approaches	What can you observe?	Action Plan: What could be done to improve sustainability?
Energy use	<p>What types of fuels are being used?</p> <p>Can you see any evidence of renewable energy being used, e.g. Solar power or Wind power?</p>		
Waste management	<p>Can you see any evidence of activities to limit the amount of waste produced?</p> <p>Are there facilities in place for recycling different materials?</p>		
Water	<p>Can you see any evidence that tap water use is being limited?</p> <p>Are there any ways that rainwater is being collected for use, e.g. rain butts?</p>		

Transport	<p>Can you see any evidence that 'green' transport is encouraged?</p> <p>More sustainable forms of transport are electric vehicles, public transport, cycling and walking.</p>		
Healthy living	<p>What evidence can you observe to show that the use of 'Earth's Resources' is considered every day? This could include thinking about where food comes from, what types of foods are eaten, avoiding creating 'greenhouses gases', reducing waste or helping the environment.</p>		
Biodiversity	<p>How are different living things being supported? E.g. are there a range of different habitats for wildlife, are there any protected areas for wildlife, are there any ways that wildlife is being encouraged to the area?</p>
